

The launch of CobrATX further drives Cobra's growth, service offerings, and value. Developed to complement Cobra Legal Solutions' world-class document review and M&A due diligence services, CobrATX spans the entire Electronic Discovery Reference Model (EDRM) to help corporate legal departments and law firms manage all of their eDiscovery and case management needs consistently and cost-effectively.

Services will include litigation technology solutions for data collections, early case assessment and analytics, processing and data extraction, hosting, review, production, and deposition preparation. CobrATX services also include multi-system integration and application development along with offering its SaaS technology, CobraPulse®, as a standalone service.

Leveraging Cobra's internal quality control processes, industry expertise, and talented project management, CobrATX will further reduce costs for its clients and grow our reach to set Cobra above the competition and a leader in the industry.

## SERVICES

### LITIGATION SOLUTIONS

CobrATX's litigation solutions include data collections, early case assessment and analytics, processing and data extraction, hosting, review, production, and deposition preparation while performing quality control throughout the entire process for corporate legal departments and law firms.

Our team is headed by a U.S. project manager who oversees the technical process of the EDRM, working directly with clients on all phases of the project from initiation and collections, best practices and defensibility through final deliverables, including total quality management and quality checks.

Our data teams in India (processing/hosting/production, database support, and infrastructure support) are well-trained and certified in the industry's leading eDiscovery technologies and softwares, including Nuix, Relativity, Xera, Encase and Law Prediscovery.

### MULTI-SYSTEM INTEGRATION

Cobra's talented IT specialists deliver high quality application development services to businesses looking for dextrous and efficient software solutions. Leveraging internal quality control processes, solid and scalable infrastructure, and proven technical expertise, Cobra's dynamic team can develop, deploy and integrate applications for standard technology platforms.

Cobra helps businesses modernize their existing applications and legacy systems to enhance web capabilities, restore system vigor and flexibility, improve integration across the enterprise, and mitigate risk.

Backed by years of development, database integration, quality control and real world testing experience, Cobra's technology specialists utilize leading application development practices and tools to design, develop, test, implement and integrate custom web and software solutions.

### SAAS TECHNOLOGY

Cobra's standalone SaaS technology, CobraPulse®, allows clients full transparency as it delivers real time metrics as a centralized application for every resource on your team, including attorney level productivity.

Through CobraPulse®, clients can monitor legal spend on any device, anytime and anywhere with internet connectivity, allowing more strategically allocated human capital hours and more informed budget considerations. Even the smallest legal department can regularly review the performance of individual attorneys and vendors as a whole.

Armed with information, clients have control over projects and access to reports that will help defend legal team's decisions and reduce potential issues before they become costly problems.
